## (54) PNEUMATIC RADIAL TIRE

### (57) Abstract:

**PROBLEM TO BE SOLVED:** To provide a pneumatic radial tire allowing improvement in high-speed durability and high-frequency road noise.

**SOLUTION:** This pneumatic radial tire uses an organic fiber cord of a small elongation percentage before vulcanizing a tire (under a load of 0.02 N/dtex) and 2.0-7.0% shrinkage percentage per original length when taken out of the tire after the vulcanization as a reinforcement cord 7 for belt reinforcement layers 5, 6 spirally wound in the substantial tire circumferential direction on the road surface side of the belt layer 2.

### LEGAL STATUS

[Date of request for examination] 16.06.2005

[Date of sending the examiner's decision of rejection]

[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]

[Date of final disposal for application]

[Patent number]

[Date of registration]

[Number of appeal against examiner's
